Enabling Independence
SmartView Synergy magnifies and enlarges text, objects and actions to help restore and maintain independence for people with macular degeneration, diabetic retinopathy or other low vision eye conditions. The simple to use controls, the ability to configure the system to their needs and Synergy’s high quality image lets people reclaim their everyday activities.

Helping every day
- Enjoy reading a good book, the latest magazine, or today’s paper
- Stay healthy by ensuring medicine is taken correctly with instructions viewed at a size you can read
- Keep the brain active by doing crosswords and Sudoku
- Relax with that long-time hobby
- Keep up with Grandchildren by viewing their latest photos
- Consult cookbooks while preparing meals
- Verify your bills as well as your bank and investment statements

Simple controls, always within reach
Synergy’s easy to use, intuitive controls are conveniently located right under the display. With one press of a button you can quickly change from showing the image in full color to viewing text in an enhanced contrast mode. Use the precise zoom control to adjust the magnification in defined steps to the level that best matches your needs.
Uncompromised Image
Synergy has been optimized to display a high quality image irrespective of the material being viewed. Whether reading a magazine page with one of the 16 enhanced contrast modes, looking at a color picture, checking the ingredients on a can of soup or cutting your finger nails, Synergy provides a superior image. The 22” widescreen display provides extra brightness without distortion.

Smooth Reading
The reading table provides smooth quiet movement in all directions. The simple, easy to use brake lets you lock the table in place in any location. By moving the same control only part of the way, you can increase the level of friction to the table movements. This will help you follow text from one line to the next.

Distinguishing details
Synergy has been designed to complement your living or working environment. The colors have been chosen to blend into the surroundings. The small footprint ensures that Synergy takes only the minimum of space.

Configurable to your needs
Synergy is available with a 19” flat LCD monitor, a 22” widescreen or for use with your own monitor or TV. The optional advanced control panel gives you the added features of a page locator light, line and blinds and computer screen sharing. To best meet your viewing needs the LCD screen can be easily adjusted up and down, swivelled left and right and tilted forward and back.
Created by people who care

Synergy is a result of a collaborative effort between HumanWare and RNIB to create a quality high value desktop electronic magnifier. HumanWare is focused on enhancing the lives of people and has been developing products for the blind and those with low vision for more than 20 years. RNIB is the UK’s leading service provider helping people with sight problems.
